

GeoRisk

Landslide and flood risk scored for a single building, from its address.

Erica Ginevri Luca Minuti Elia Marabotto

University of Pisa · Business and Project Management

Academic Year 2025/2026

The problem

94.5%

of Italian towns
exposed

15%

of companies
insured

€1.7bn

of premiums not
collected

The granularity gap

The solution

Competitive landscape

PLAYER	PERIL COVERED	TARGET CUSTOMER	IN ITALY
Verisk, Cytora	Flood only	Enterprise	No
Eoliann, SaferPlaces	Flood only	Large insurers, public bodies	Yes
Previsico	Flood only	Enterprise	One customer
PAI / ISPRA maps	Landslide + flood	Anyone, but manual	Source, not product
CRIF, Cerved	None yet	Banks and insurers	Yes
GeoRisk	Landslide + flood	Brokers and small insurers	Yes

Eoliann and Vittoria, GIS to AI: 67% → 78% of real events correctly identified.

Strategic positioning

Business Model Canvas

TWO TYPES OF CLIENTS

Brokers & loss adjusters – weeks – ~€1,700 / year

Small & medium insurers – months – €24,000 / year

Worth more, harder to reach – so brokers come first

ISPRA · OpenStreetMap – not partners: no contract

MARKET ENTRY

Pipeline and defensibility

THE PIPELINE — FROM ADDRESS TO SCORE

WHAT PROTECTS US — THREE LAYERS OF DATA

LAYER 1

Public data — anyone can take them

LAYER 2

Our database — expensive to rebuild, but possible

LAYER 3

Our scores next to what really happened — the only real barrier, and it comes only from clients

IFFI: exact coordinates · EM-DAT: often only the province

Unit economics

99.5%

of what the client pays stays with us

€0.01 cost per assessment — half of it is the geocoding · client pays ~€2

Free trial — 5 assessments Starter €99 / month Pro €399 / month Enterprise €24,000 / year

Enterprise €2.40 / report vs Starter €1.98 — pays for the API, the support and the documents for the supervisor.

Market sizing

TAM · €38.6M per year

22,000 intermediaries + 45 insurers

SAM · €9.6M per year

Centre and North, above five assessments a month

SOM · €377k ARR

Year three — under 4% of the SAM

Three-year plan

	YEAR 1	YEAR 2	YEAR 3
Paying offices	11	60	165
Insurers	1	2	4
Revenue	€30,700	€150,000	€376,500
Fixed costs	€155,000	€192,000	€227,000

Investment case

7.8x

Brokers & loss adjusters – LTV
€4,700 on CAC €600

12x

Insurers – LTV €96,000 on CAC
€8,000

Personas

Independent loss adjuster or broker

USES THE TOOL

Today — coarse maps, checked by hand

Goal — a score they can defend

Underwriter, regional insurer

SETS THE PRICE

Today — the same premium for different risks

Goal — a differentiated premium

Head of compliance

NEVER OPENS IT — AUTHORISE THE PURCHASE

Today — a new EU rule, and no budget for the big tools

Goal — climate scenarios for the supervisor

Forget the third one and you sell nothing to the insurers.

Validation ladder

To test if everything works, we go in five steps.

COST AND COMMITMENT

Every step has a number to reach, fixed before the test. Miss it and we stop.

Failure analysis

SCENARIO	PROBABILITY	IMPACT	WHEN IT HITS
The Enterprise channel does not open	High	Fatal	Months 12–24
Small firms do not subscribe	High	Fatal	Months 6–18
Incumbents give the feature away	Medium	Fatal	Months 24–36
Geocoding error and lawsuit	Low	Fatal	Any moment
Climate drift of the model	Low	Cumulative	Months 18–36
Regulatory shock and the AI Act	Low	Severe	Months 12–24

Early warning and mitigation

SIGNAL	RESPONSE
No second insurer in pilot by month 12	Three negotiations in parallel
Churn above 7% a month	Annual packages instead of subscriptions
Wrong addresses above 1.5%	Second geocoder and a confidence index
A free Cat-Nat module announced	Move to complex claims and ORSA reporting
ISPRA availability under 95%	Local PostGIS mirror of the data
Mitigations €13,500 / year	Capital €250,000 → €280,000

The bet is commercial, not technical.

€280,000 of capital	Two years of expected loss	Break-even at month 28	Enterprise channel open by year two
---------------------	----------------------------	------------------------	-------------------------------------
